REQ #: 17279462 LAB #: I0999129
AGE: SEX: F COLLECTED: 01/18/2011
SPECIES: CANINE RECEIVED: 01/18/2011 22
BREED: REPORTED: 01/21/2011 10

FOR:

TEST PROCEDURES	RESULTS	REFERENCE RANGE	UNITS
EHRlichia CANIS AB IFA			
EHRlichia CANIS AB	NEGATIVE		

Interpretation:

If your result is:	The interpretation is:
NEGATIVE	No antibody present @ 1:25
POSITIVE @ (titer)	Antibody present @ (titer)

Positive samples are tested in incremental dilutions to 1:3200. Titers beyond 1:3200 are usually of limited clinical value. If you wish an endpoint titer there is an additional charge. A positive titer indicates exposure to E.canis or similar antigen but does not confirm the presence of disease. A CBC is recommended to identify abnormalities consistent with infection. If confirmation of infection is desired, Ehrlichia PCR test, code 2634 can be useful, especially in clinically sick animals.

ME (BORRELIOSES) TITER
LYME (BORRELIOSES) TITER POSITIVE @ 1:100

Interpretation:

If your result is:	The interpretation is:
NEGATIVE	No antibody present @ 1:100
POSITIVE @ (titer)	Antibody present @ (titer)

Positive samples are tested in incremental dilutions to 1:12,800. A positive titer indicates exposure to Borrelia burgdorferi or similar

REQ #:	17279462	LAB #:	I0999129
AGE:		SEX:	F
SPECIES:	CANINE	COLLECTED:	01/18/2011
BREED:		RECEIVED:	01/18/2011 22
		REPORTED:	01/21/2011 10

FOR:

PROCEDURES	RESULTS	REFERENCE RANGE	UNITS
antigen but does not confirm the presence of disease. Titers may be affected by vaccination or disease. In the dog, a Western Blot Test (code 936) is recommended for differentiating vaccine titers vs. natural infection.			

IN DOGS, we are now recommending the new Lyme Quant C6 antibody test, code 7246, as a more accurate way to diagnose Lyme disease. This test identifies C6 antibody levels. C6 is a more sensitive and specific marker for active Lyme infection. Unlike the traditional whole cell tests like Lyme IFA or Western blot, C6 levels will decline when the dog is successfully treated.

CKY MOUNTAIN SPOTTED FVR POSITIVE @ 1:200

Interpretation:

your result is:	The interpretation is:
NEGATIVE	No antibody present @ 1:25
POSITIVE @ (titer)	Antibody present @ (titer)

sitive samples are tested in incremental dilutions to 1:1600. Titers beyond 1:1600 are usually of limited clinical value. If you wish an endpoint titer there is an additional charge. Singles titer of greater than or equal to 1:1024 are suggestive of active infection. Low or negative acute titers should be reevaluated in 2-3 weeks (convalescent titer).
